

Priority ERPL Construction Module

Complete control of your business, with great
business insight, flexibility & never ending
opportunities for growth and development

Build Your Business...

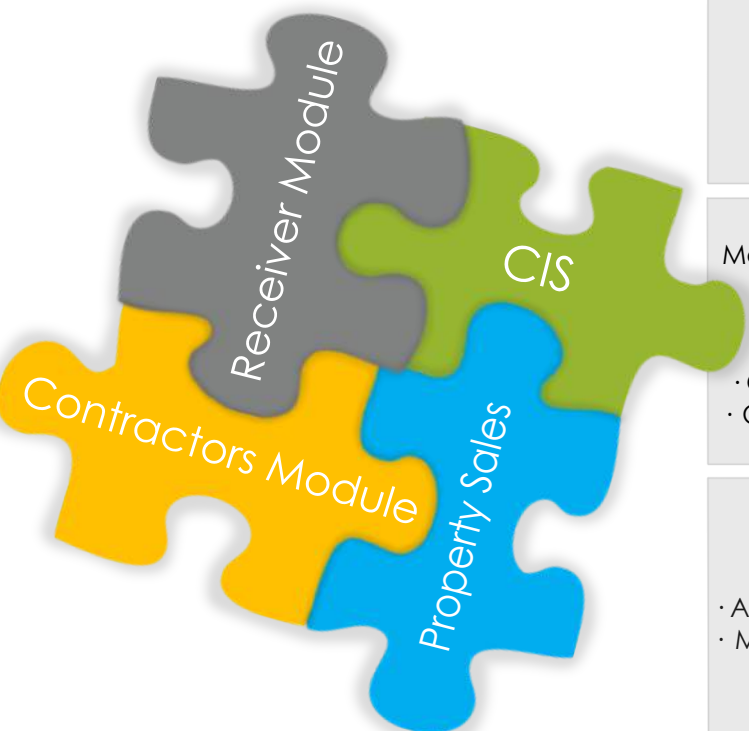

Operating a construction business can be an extremely complex job. Each project has so many parts its hard to keep track of them all. Other challenges include weather, site conditions, material specification changes, owner preferences and coordination between other contractors. Not to mention the site risk and other accountability factors.

Success comes from the management of construction risks and ensuring accountability. This is where Priority comes in. Priority is a fully integrated ERPL Software that can streamline performance and reduce human error. It can handle the complexities of the entire project lifecycle. Priority gives you end to end control and seamless workflows, so contractors can achieve operational efficiencies and cost reductions to guarantee profitability.

The construction module within Priority is specifically aimed at organisations involved in land purchase, development and residential property management. Priority interacts with all modules to manage the whole process, CRM, Sales Quotations, Project Management, Finance, Customer Service, Maintenance and more.

...From the Ground Up!

CIS
The Construction Industry Scheme is run by our government (and others) to ensure that small sub-contractors pay their due VAT. In Priority this is standard functionality.

Receiver Module
Manages and defines the process for authorising bills as well as managing the process of preparing the bill and billing the receiver.
Key Functionality
· Control over invoicing · Update the receiver bill at any time
· Managed billed amounts · Raising & Receiving Bills
· Control & analyse approved value, interest or contract item

Contractors Module
Manage both upward and downward contractor relationships between company, clients and sub contractors.
Key Functionality
· Change control of material orders · Manage partial bills
· Quotations comparison · Sub-contractors collateral insurance
· Calculate index changes and lien · Back to back contracts, controlling and reporting process

Residential Property Sales Module
Manage the sale & rental of apartments to clients.
Key Functionality
· Advanced CRM · Property inventory by site, building/apartment
· Management of public areas · Define site building, property sale including installment plan · Hierarchy system for authorising
· Monitoring of late payments · Manage guarantees

Reconstruct the way you work...
